### STRUCTURE DIAGRAM

### SEAL POSTS

#### Material:

synthetic fabric of neoprene rubber

The sealing column is a central continuous cylindrical shape, which is continuously inflated by an external blower and equipped with balance holes in each part.

### FEATURE

It is commonly used in food and medicine and other high-cleaning loading and unloading ports, and is suitable for large and medium-sized cars. The door seal can block the weather and the weather, insects, dust pollution and other goods in contact with the goods in the warehouse vehicle.
