### STRUCTURE DIAGRAM

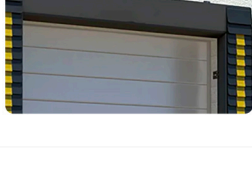

Standard Sponge Dock Shelter

Adjustable Sponge Dock Shelter

### TOP SPONGE

#### Fixed/Adjustable:

The fixed design is stable and durable, suitable for loading and unloading scenarios where the height of the compartment is the same; while the adjustable top can be adapted to different heights of vehicles through the built-in sliding mechanism, improving sealing effect and convenience.

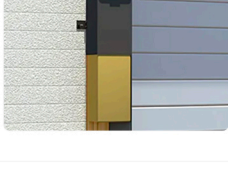

### BASE CLOTH

The outer layer of the dock shelter is made of high-density polyester fiber base cloth, which has excellent tear and abrasion resistance, adapting to long-term use under frequent splicing.

The sealing area is added with yellow scale protection layer, which not only effectively enhances the local abrasion resistance and prolongs the service life, but also serves as a visual warning to enhance the safety and precision of vehicle docking.

### SPONGE

The interior of the sponge dock shelter is filled with high-density polyurethane sponge, which has excellent resilience and compressive strength. It can maintain a stable shape during repeated vehicle connections and effectively achieve sealing and isolation for a long time.
