STRUCTURE DIAGRAM

PANEL

The cold storage door leaf is a fully enclosed integral frame structure, rigid polyurethane foaming, stainless steel inside and outside the door leaf, also available: painted steel plate, galvanized sheet.

TRACK

The top track is a curve form. When the doors closed, the door leaf automatically presses the floor and the door frame, with good sealing performance is guaranteed. When opened, the door leaf leaves the door frame and rises, reducing the friction between the sealing rubber strip and the door frame and floor.

ACCESSORIES

There is a low voltage electric heater around the door leaf to prevent the door and frame from freezing at low temperatures.
