STRUCTURE DIAGRAM

CURTAIN

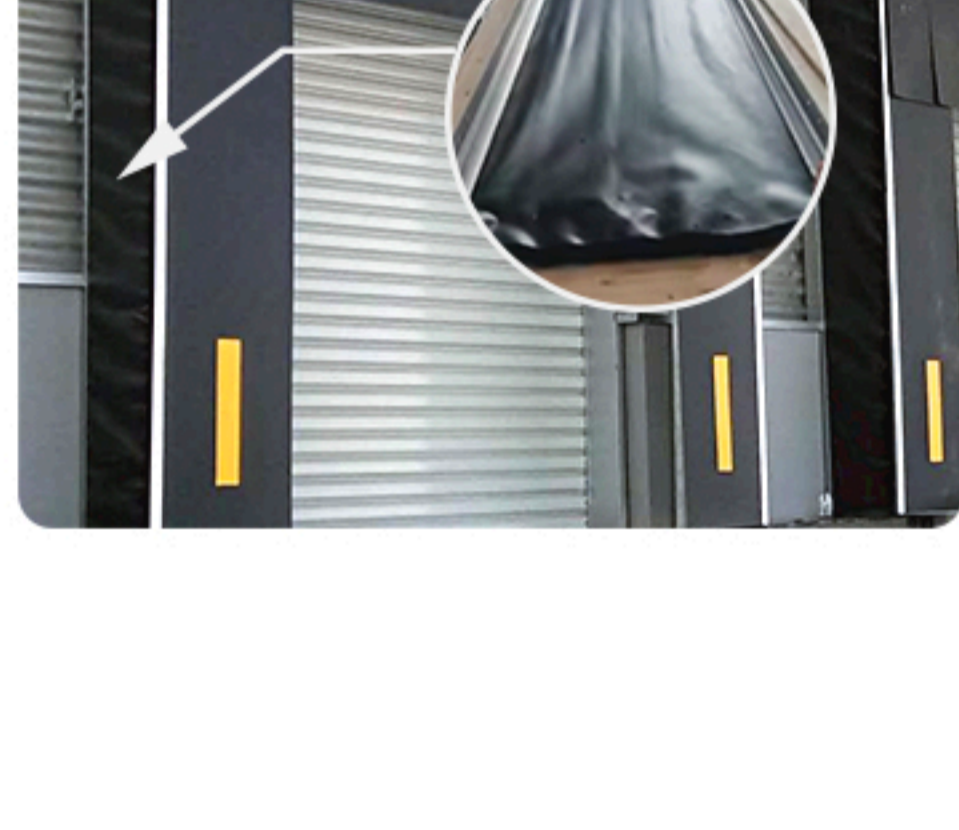

■ Front Sealing Curtain:

The front sealing curtain consists of three pieces of 3 mm thick high-density black polyester with a yellow reverse bar.

■ Surrounding Sealing Curtain:

The surrounding sealing curtain is composed of 0.8 mm thick high-density polyester fiber.

STEEL SKELETON

The mechanical dock shelter is internally constructed with a high-strength steel skeleton structure that provides stable support and ensures that the seal remains in the same shape during frequent use.

ACCESSORIES

Mechanical dock shelter accessories include steel skeleton, buffer pads, sealing curtains and other key components, all of which are made of industrial-grade materials and precision manufacturing, ensuring a solid seal structure, excellent sealing performance, and long-lasting and stable performance in high-frequency loading and unloading operations.
