### STRUCTURE DIAGRAM

### MOTOR

■ Chinese top brand motor

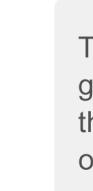

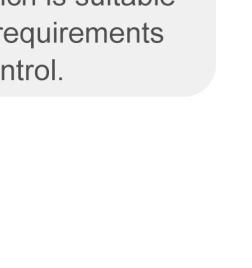

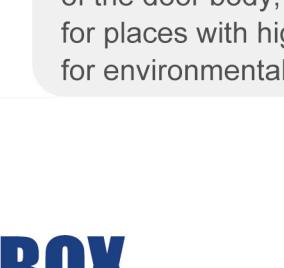

■ Can be opened manually when power failure

We use exclusive motors for rolling doors, which can be used to open the door manually during a power outage, providing double protection.

### BUTTON AND REMOTE

Opening methods include buttons and remote controls which can open the door remotely.

### SAFETY DEVICE

Closure Detector

Photo Detector

Closure detector and photocell sensor serve as safety devices that can detect pedestrians passing by in time, providing safety guarantee for people when entering and exiting.

### SLATS

■ Slat thickness: 0.8-1.0mm  
■ Material: Galvanized steel or Stainless steel

There are a variety of slates with different styles and functions to choose.

Closure detector and photocell sensor serve as safety devices that can detect pedestrians passing by in time, providing safety guarantee for people when entering and exiting.

### RAILS WITH SEAL

120mm\*60mm\*1.8mm 100mm\*55mm\*1.5mm 90mm\*50mm\*1.5mm

Can eliminate noise and enhanced tightness

The track can be equipped with optional sealing rubber strips to effectively enhance the airtightness and sound insulation performance of the door body, which is suitable for places with high requirements for environmental control.

### HOOD COVER BOX

The hood cover box is also made of galvanized steel. The presence of the box can extend the service life of the motor.

The track can be equipped with optional sealing rubber strips to effectively enhance the airtightness and sound insulation performance of the door body, which is suitable for places with high requirements for environmental control.
