## STRUCTURE DIAGRAM

## PANEL

### Galvanized Steel Panel:

Galvanized color steel door plate adopts high-quality steel plate surface spraying treatment, with good anti-rust, anti-corrosion performance, beautiful appearance, color variety, cost-effective.

Galvanized steel door panels are available in different colors.  
Common colors: **white**, **grey**, **red**, **yellow**.

### Surrounding Sealing Curtain:

Stainless steel door plate is made of 304 stainless steel, high strength, excellent corrosion resistance, stronger impact resistance, easy to clean surface, chemical erosion resistance, especially suitable for high humidity, high hygiene level or cleaning frequent environment

## WINDOW

Double layer **PMMA** material, complying with security requirements, it will keep in good condition after long-time frequent crashing. Even if it got broken, it will not break into pieces like regular glass.

## HINGE

Auto-closing: Door axis is special eccentric design, the door body leans along the axis, generating a force reverse with opening direction. Thus the door will close automatically.

Normal Hinge

Heavy Duty Hinge

## AUTO-COLLISION RUBBER PLATE

Adopt arc structure design, with excellent structural elasticity and buffer performance, can effectively absorb the impact of external forces, to withstand frequent vehicle or equipment collision but not easy to deform. Widely used in the lower edge of the door, corners, channels and other vulnerable areas, effective protection of facilities and equipment, to extend the service life.
